Software Requirement

This chapter describes how to configure the IVI driver to control the instrument. If you want to use the IVI Driver, you must install NI-VISA, the IVI Compliance Package, and a C language development system that supports the IVI driver library.

Install NI-MAX

Currently, NI-VISA is packaged in two versions: Full version and Run-Time Engine version. The full version includes the NI device drivers and a tool named NI-MAX which is a user interface to control and test remotely connected devices. You need to install the full version of NI-VISA.

You can get the NI-VISA 15.5full version or higher version from

*https://www.ni.com/en-us/support/downloads/drivers/download.ni-visa.html#306031*.

a. Double click the NIVISA 15.5 full.exe, a dialog will be shown as below:
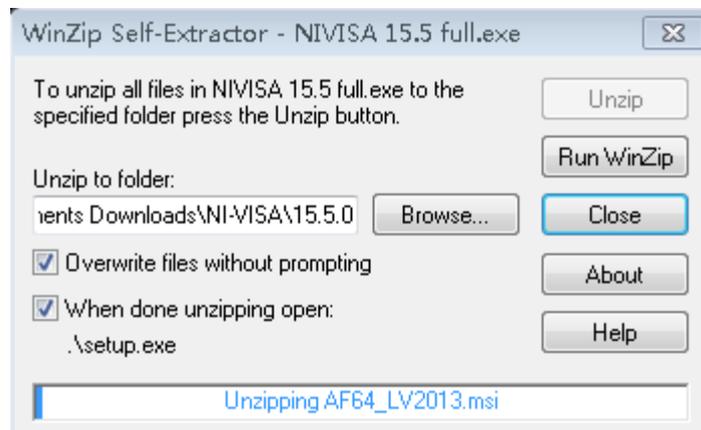

b. Click Unzip, the installation process will automatically launch after unzipping files. If your computer needs to install .NET Framework 4, it may auto start.

c. The NI-VISA installing dialog is shown above. Click Next to start the installation process.
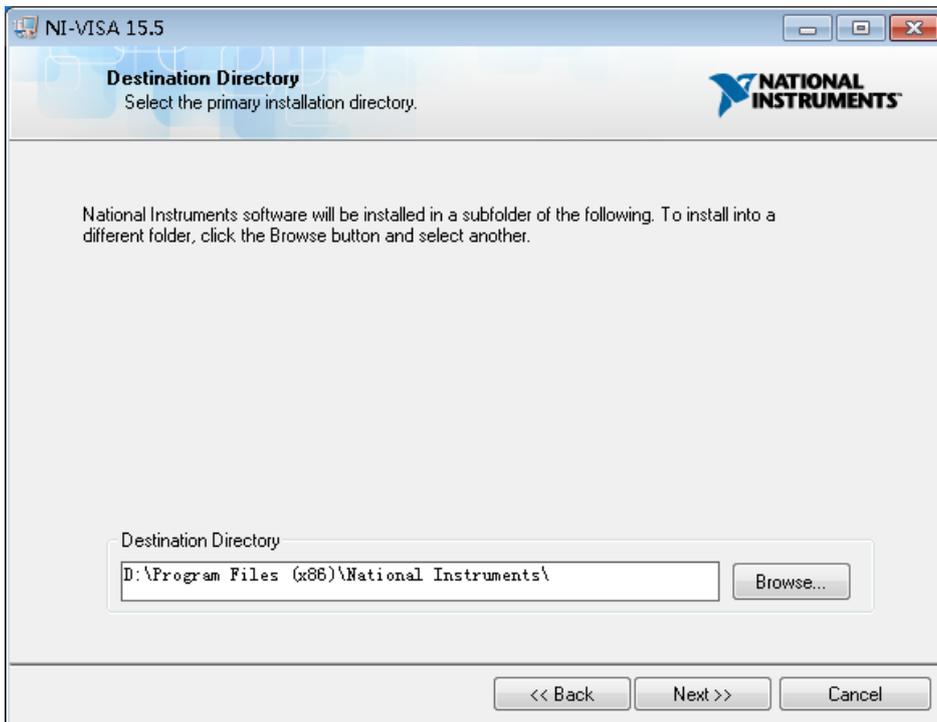

d. Set the install path. The default path is "C:\Program Files\National Instruments\".

You can change it. Click Next.
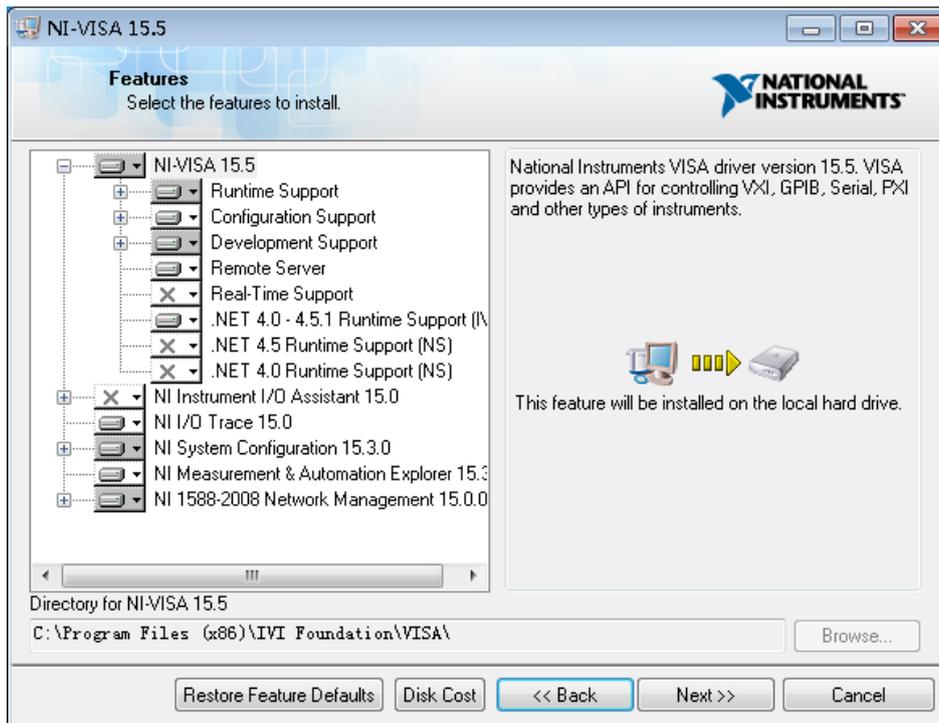

e. Click Next twice, in the License Agreement dialog, select "I accept the above 2 License Agreement(s).", and click Next.
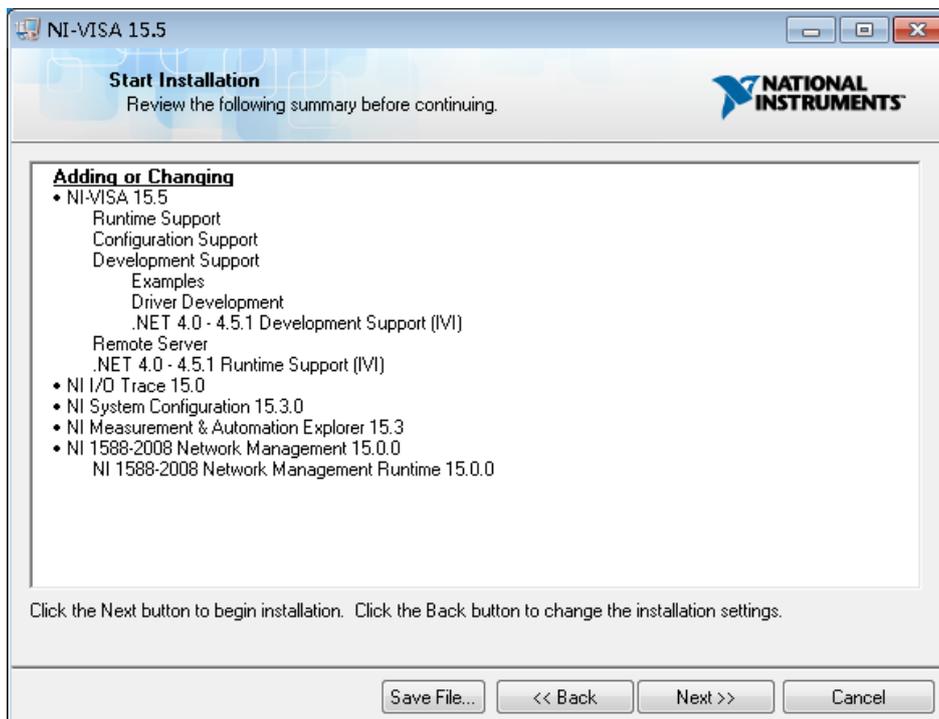

f. Click Next to begin the installation.
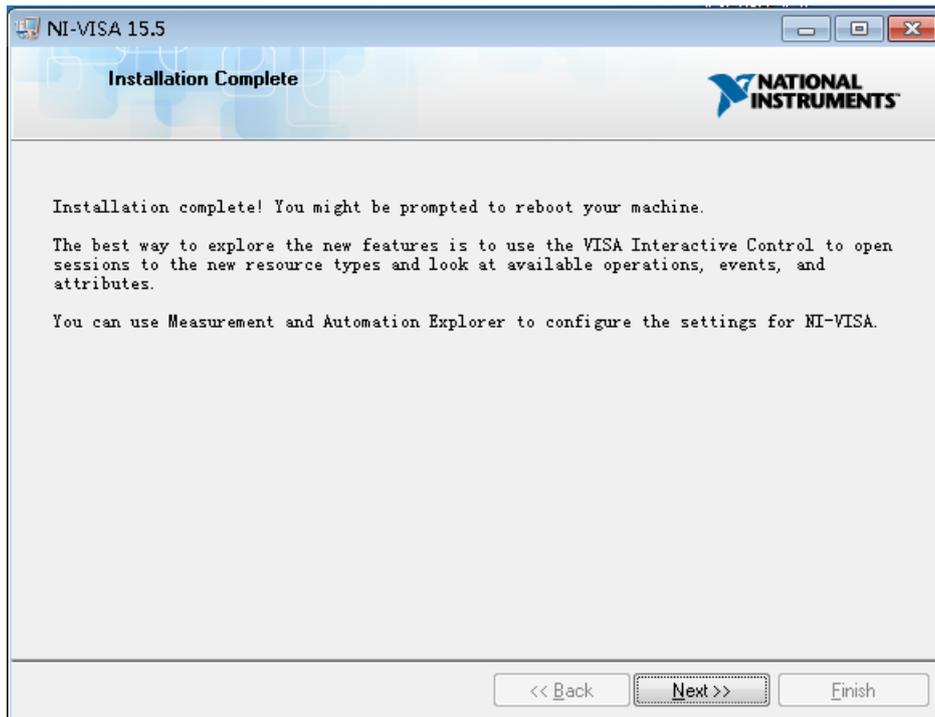

g. Wait until the installation is completed, and then reboot your PC.

Install the IVI Compliance Package

The IVI Compliance Package contains the IVI class drivers and supported libraries for developing and leveraging IVI-based applications.

You can get the IVI Compliance Package from

https://www.ni.com/zh-cn/support/downloads/drivers/download.ivi-compliance-package.html#329444

If the IVI Compliance Package is not installed, there is no IVI Drivers option in "My System".

a. Install the IVI Compliance Package (ICP).
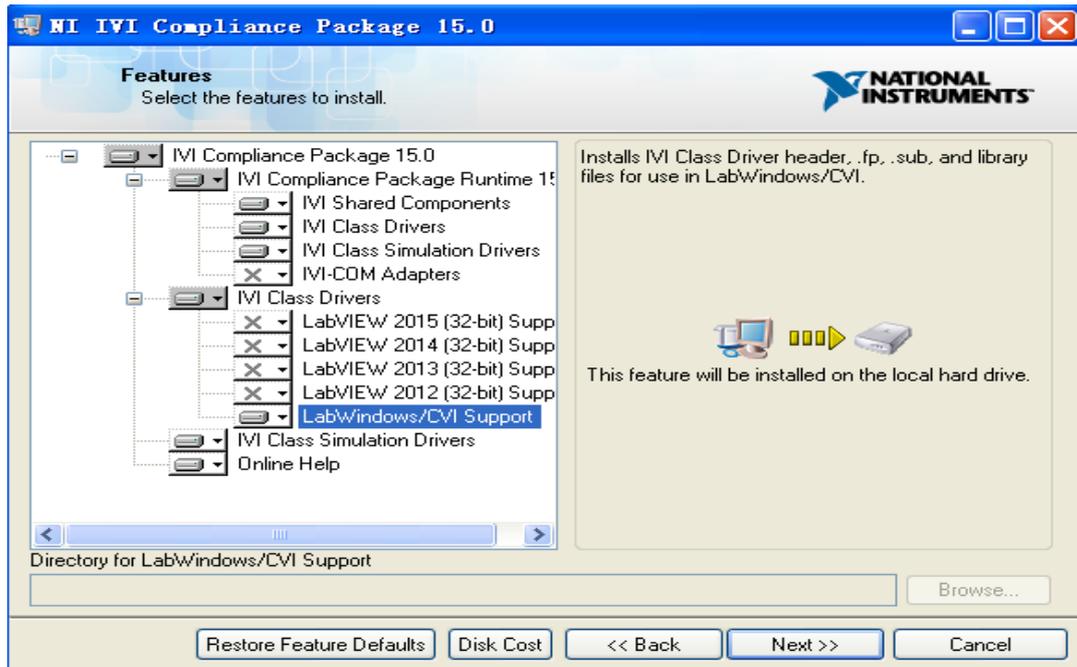

b.   Restart your computer after the installation. After the reboot, the IVI Drivers option appears.

SDM IVI-C Driver Package List

The SDM IVI-C driver package provides three kinds of files: sdm.dll file, sdm.lib file and sdm.h file.

File	Description
sdm.dll / sdm64.dll	A dynamic link library file, including variables, functions, and data interfaces for various attributes.
sdm.lib / sdm64.lib	An import library file, including the symbolic name and optional identification number of each exported function in the sdm.dll file.
sdm.h	A header file, including declarations of variables, functions, and data interfaces.

You include the sdm.h when programming the Siglent Digital Multimeters with the IVI driver, and load the sdm.dll dynamic file or sdm.lib import library file into your own project.

You will find an example that show you how to use these files at the end of this document.

Introduction to IVI

IVI (Interchangeable Virtual Instruments) is a new generation of instrument driver technology specifications introduced by the IVI Foundation. IVI can realize the interchangeability with the instrument, the instrument simulation, and the instrument state tracking and buffer function. All references to IVI drivers in this document refer to IVI-C drivers that are created using NI tools and that rely on the IVI Engine.

IVI Data Type

There are five data types for the attributes of the IVI Engine: ViInt32, ViReal64, ViString, ViBoolean, and ViSession.

Table 1 Data Type

Data Type	Description
ViInt32	32-bit signed integer
ViReal64	64-bit floating-point number
